

DMX Splitter 1 in 4 out

DMX-Splitter is a 4-way DMX signal splitter incorporating FULL isolation between all inputs, outputs and power supply. The DMX Splitter can be used to facilitate many DMX LED Lighting installations, on many occasions making "daisy-chain" wiring associated with the DMX protocol a lot easier to complete.

The DMX Splitter allows 1 DMX signal line to drive 4 additional signal lines, with each output line driving upto 31 devices.

DMX SPLITTER FEATURES

- USITT DMX512 / 1990 (4 μ Sec) compliant
- RS485 compliant
- Full isolation for maximum reliability
- 4 outputs isolated from each other
- Outputs isolated from input
- Inputs and outputs isolated from power supply
- On-board selectable input terminate (120 Ohm)
- Power and Data indicator LEDs
